Personalizing teaching in pedagogical support: methodological strategies for inclusive education and cognitive development.

The personalization of teaching in pedagogical support: methodological strategies for inclusive education and cognitive development

The personalization of teaching in pedagogical support: methodological strategies for inclusive education and cognitive development

Anna Karolina Câmara Martins de Sá1

SUMMARY

This scientific article investigates the effectiveness of personalized teaching in extracurricular educational support environments, in contrast to traditional methods of homogeneous reinforcement. Based on an analysis grounded in educational sciences and cognitive linguistics, the study dissects how the application of individualized academic diagnoses contributes to the identification of learning gaps. The research addresses the structuring of controlled learning environments, the ethical integration of educational technologies, and the importance of the family-school-support triad in building student autonomy. The formulation of strategies for inclusive education is highlighted, with an evaluation of the impact of specialized support on the socio-emotional development of students with Autism Spectrum Disorder (ASD). The theoretical results indicate that the convergence between rigorous pedagogical planning and structured listening constitutes the pillar for overcoming chronic learning deficiencies and promoting emancipatory education.

Keywords: Pedagogical Support. Inclusive Education. Individualized Diagnosis. Autism Spectrum Disorder. Cognitive Literacy.

ABSTRACT

This scientific article investigates the efficacy of personalized teaching in extracurricular pedagogical support settings, contrasting it with traditional homogeneous tutoring. Based on an analysis grounded in educational sciences and cognitive linguistics, the study dissects how the application of individualized academic diagnostics helps identify learning gaps. The research addresses the structuring of controlled study environments, the ethical integration of educational technologies, and the importance of the family-school-support triad in building student autonomy. It highlights the formulation of strategies for inclusive education, evaluating the impact of specialized monitoring on the socio-emotional development of students with Autism Spectrum Disorder (ASD). Theoretical results indicate that the convergence of rigorous pedagogical planning and structured listening constitutes the pillar for overcoming chronic learning deficiencies and promoting emancipatory education.

Keywords: Pedagogical Support. Including Education. Individualized Diagnosis. Autism Spectrum Disorder. Cognitive Literacy.

structured within the home environment. The application of exploratory tests allows the educator to draw an accurate picture of the student's skills, clearly separating the skills already ingrained, as well as those requiring immediate rebuilding by the team. pedagogical.

Once the diagnosis is complete, the transition to the planning phase requires the preparation of a A unique and adaptable intervention plan, strictly aligned with the curriculum guidelines of school of origin. Personalized learning means that a student with a visual memory A sharp student will receive the content through graphic diagrams, while a student with Dominant auditory processing will be conducted through discussions and exercises of Oral fixation. This methodological flexibility is often unfeasible in regular classrooms. Full classrooms ensure accelerated academic performance, optimizing the time invested. and quickly rebuilding the student's positive self-image regarding their own intelligence.

The dynamics of diagnosis are not limited to a single initial moment; they operate under the paradigm of continuous formative assessment. During each study session, the educator performs the The role of a constant clinical investigator, adjusting the teaching approach based on the responses. instantaneous and at the student's problem-solving pace. If an explanatory strategy The method applied in one day did not produce the expected retention effect; methodological rotation occurs in The following meeting, preventing the gap from becoming perpetuated. This vigilance ensures that no structural doubts should be carried forward, consolidating each new level of knowledge. a robust form in the cognitive apparatus of the child or adolescent.

The practical results of applying individualized diagnosis materialize not only in improving school assessment metrics, but also in the profound transformation The learner's behavioral pattern. The child who previously showed aversion to studying begins to demonstrate intellectual autonomy, proactive engagement, and confidence to argue with their teachers. The effectiveness of this model proves that academic failure statistics They largely reflect the absence of methods that engage with the brain's mechanisms. specific to each student. Personalized education ultimately acts as a A mechanism to rescue the educational trajectory and dignity of the individual in training.

4. EDUCATIONAL INCLUSION AND AUTISM SPECTRUM DISORDER (ASD) IN A REINFORCEMENT ENVIRONMENT

Democratizing access to mainstream education for students with Down Syndrome. The Autism Spectrum Disorder (ASD) represented progress guided by essential inclusive legislation.
