This article explores the impact of procurement intelligence and the formation of supplier pools *on* the...
Corporate agility. Based on a review of studies between 2021 and 2024, this article discusses how delegating less complex purchases optimizes the allocation of specialized human capital. It concludes that adopting these practices fosters organizational maturity, although it requires rigorous internal control mechanisms to prevent non-compliance.
Keywords: Procurement Intelligence, Procure-to-Pay, Decentralization, Supplier Management, Operational Efficiency.

Abstract:

The evolution of the purchasing function demands the transition from transactional activities to analytical governance models. Current literature suggests that modernizing the procure-to-pay flow and strategically decentralizing low-value requisitions tend to reduce cycle times and operational costs. This article explores the impact of purchasing intelligence and the formation of supplier pools on corporate agility. Based on a review of studies between 2021 and 2024, it discusses how delegating lower-complexity purchases optimizes the allocation of specialized human capital. It is concluded that adopting these practices favors organizational maturity, although it requires rigorous internal control mechanisms to prevent compliance deviations.
Keywords: Purchasing Intelligence, Procure-to-Pay, Decentralization, Supplier Management, Operational Efficiency.

Introduction

In the contemporary business environment, the corporate purchasing function has been undergoing...

a profound conceptual reassessment. Previously relegated to an administrative and reactive position,

primarily responsible for the mechanical processing of orders, the area of

Supply chains have come to be recognized as a vital component of financial strategy.

Authors point out that the instability of global supply chains and the pressure

Inflationary pressures require companies to develop predictive capabilities, shifting the focus of...

mere price control for comprehensive management of Total Cost of Ownership (TCO) and

risk mitigation.

Modernizing the procurement and payment cycle *(procure-to-pay)* is presented as one of the The main drivers of this transformation. The literature indicates that inefficiency in processing Processing requisitions consumes a significant portion of purchasing professionals' time. preventing them from engaging in higher value-added activities, such as development. Strategic supplier management. Faced with this limitation, organizational strategies such as Decentralization of low-value purchases and the creation of pre-supplier panels.

Those who have passed have gained prominence both academically and practically as viable alternatives for Reduce the cycle time *(lead time).*

This article aims to analyze the operational impacts of applying intelligence. of purchasing, combined with the controlled decentralization of processes. The text is structured in five developmental sections, which address the theoretical evolution of purchasing department, the impacts of automation on the procure-to-pay cycle, the strategy of Delegating low-value acquisitions and optimizing deadlines through catalogs of suppliers and the pressing need to adopt analytical methodologies. Finally, the The conclusions summarize the findings and suggest directions for future research.

1. The Evolution of Purchasing Intelligence in Corporate Strategy

Historically, the purchasing department operated from a transactional perspective, in which The main success metric was achieving the lowest unit price. Monczka et al. (2021) They note that this paradigm has proven inadequate to support operations in supply chains. volatile supplies, in which an excessive focus on initial cost often results in Quality issues or delivery delays. The need for a more sophisticated approach. This gave rise to the concept of Purchasing Intelligence .

Purchasing intelligence is characterized by the application of analytical methods and the processing of data. data to support *sourcing decisions.* According to Handfield and Linton (2022), this Transition requires professionals in the field to understand market dynamics and monitor... commodity indices and assess the financial and geopolitical risks of their partners. Business. Formulating mature purchasing policies requires coordination. Interdisciplinary, involving the areas of finance, legal and compliance .

The literature suggests that companies with high maturity in purchasing intelligence exhibit... greater capacity to adapt to external shocks. Ivanov (2024) demonstrates that the collection

Continuous information about the supplier market allows the construction of matrices of precise risk assessments. This mapping enables the development of alternative sources of... Supply before a shortage of a specific input affects the continuity of operations. productive.

On the other hand, the implementation of this intelligence runs into structural barriers. Kache and Seuring (2021) points out that data fragmentation in legacy systems prevents the A clear visualization of corporate spending *(spend analysis).* When information about Suppliers and billing are siloed, the purchasing department operates "blindly," which It hinders the consolidation of volumes and the negotiation of contracts at the corporate level.

Thus, it is clear that progress towards a strategic model depends, first and foremost, of data hygiene and governance. Studies indicate that standardized registration and the Centralization of contractual information constitutes the mandatory operational foundation. so that the organization can, in fact, abandon corrective tasks and perform the true... Market intelligence in resource acquisition.

2. Modernizing the Procure-to-Pay (P2P) Cycle

The *Procure-to-Pay* (P2P) cycle encompasses all stages, from the internal requisition of a good. or service until the supplier receives actual payment. Academic literature has highlighted that the Inefficiency in this process generates high administrative costs and friction with business partners. Fosso Wamba et al. (2022) observe that predominantly manual P2P processes are susceptible to typing errors, lost invoices, and approval delays, factors that They compromise the predictability of cash flow.

P2P automation presents itself as the main methodological response to these shortcomings. Studies suggest that the integration between purchasing platforms and planning systems... Enterprise resource planning (ERP) provides real-time visibility into the status of requests. Dubey et al. (2023) argue that the adoption of electronic approval workflows, Based on pre-established governance rules, it drastically reduces the time required. to transform an internal need into a formalized purchase order.

In addition to speed, the modernization of P2P helps mitigate fraud and diversion. Establishment of automated *three-way matching* — which crosses the Purchase order, physical receipt, and invoice information — acts as a strong Internal control. Authors such as Gunasekaran et al. (2022) indicate that organizations with high

company.

3. Strategic Decentralization and Delegated Procurement

One of the most persistent debates in the supply chain management literature is the dichotomy between centralization and decentralization of the purchasing function. Van Weele (2022) posits that,
While centralization favors the consolidation of volumes and the standardization of contracts,
It tends to stifle operations, creating bottlenecks in the acquisition of low value-added items or
of local urgency. Excessive centralization often overburdens buyers with
a myriad of trivial operational processes.
To address this dilemma, the delegated purchasing model *has* been...
widely suggested as a hybrid solution. Christopher (2021) describes this practice as the
Formal delegation of authority to the requesters themselves (business areas).
conduct acquisitions of small financial amounts, without the need for intervention from
central supply department. It is observed that this strategy obstructs workflow.
from sourcing experts .
The effectiveness of delegated purchasing depends directly on defining restrictive parameters.
Clear. Studies indicate that decentralization is only safe when accompanied by catalogs.
predefined electronic devices or the use of corporate purchase cards *(p-cards).* Carter et al.
(2021) observed that limiting the spending ceiling (e.g., purchases up to ten thousand reais)

Year VI, v.1 2025 | Submission: October 25, 2025 | Accepted: October 28, 2025 | Publication: November 1, 2025

and restricting access to approved suppliers prevents the organization from being financially exposed, keeping control under the umbrella of purchases.

The literature points to substantial positive impacts on the allocation of human capital. By transferring By processing low-value orders for end users, the organization frees up its resources. Senior buyers to act on strategic fronts, such as complex negotiations, Mitigating contractual risks and promoting technological development with suppliers. Controlled decentralization therefore acts as a capacity optimization mechanism. intellectual of the team.

However, it is observed that maintaining this model requires continuous audits. MacCarthy et al. (2022) warn that loosening supervision may result in artificial splitting. Shopping spree — a practice in which users split a large purchase into several smaller ones. circumventing the financial approval limit. It is concluded that subsequent analytical audits *(post-audit)* are indispensable to guarantee the integrity of decentralization.

4. Supplier Panels and Cycle Time Optimization

The speed of response from the purchasing department to the demands of the business units acts... as a critical performance indicator *(internal* lead time). The literature shows that the need to conduct individual price quotes and negotiation rounds for services or supplies Repetitive tasks consume procedural time, often hindering operational efficiency. According to Handfield et al. (2022), the structuring of supplier *pools* This emerges as an effective methodology to mitigate this delay.

The concept of a supplier panel is based on the pre-qualification of a restricted set of companies to provide goods or services in specific categories. Studies suggest that Formalization of umbrella agreements *(framework agreements)* with fees and service levels. pre-established rules allow requests to be converted directly into orders. purchasing, eliminating the need for *Request for* Quotation (RFQ) processes for each new demand (Monczka et al., 2021).

The practical impact of this approach on cycle time is significant. It is observed that Organizations that adopt restricted catalogs and preferred supplier lists report Substantial reductions in internal response times. By eliminating informational friction. And for isolated, low-impact negotiations, the purchasing department provides the operation with... Predictability of supply that brings the corporate procurement experience closer to
