Summary

Community pharmacies and small clinics have consolidated their position as primary access points to healthcare systems. Recent academic literature suggests that the efficiency of these establishments is frequently affected by chronic operational challenges, a shortage of qualified personnel, and the high regulatory complexity in drug control. This article analyzes the impact of operations management and health compliance on the sustainability of pharmacies and outpatient clinics. Based on a review of studies published between 2021 and 2025, it discusses whether inventory control, talent recruitment, and process digitization contribute to the sector's resilience. It is observed that the alignment between clinical technical responsibility and rigorous administrative management favors resource optimization and tends to improve the quality of care provided to the population.
