SUMMARY

This scientific article analyzes strategies for disseminating knowledge and training new professionals in the areas of administration and process management. The research investigates how organizations can structure effective corporate education programs to transform operational employees into capable leaders. The study delves into the concepts of andragogy, emotional intelligence, and ongoing mentoring, highlighting the need to align theoretical learning with the practical demands of the business environment. Additionally, it explores process standardization as a pedagogical tool capable of accelerating the learning curve of new managers. The results indicate that creating an organizational culture focused on teaching and knowledge sharing is the safest mechanism to ensure the sustainability of companies and the ethical development of future executives.

Keywords: Corporate Education. Leadership Development. Knowledge Dissemination. Human Resource Management. Andragogy.

ABSTRACT

This scientific article analyzes strategies for knowledge dissemination and training new professionals in administration and process management. The research investigates how organizations can structure efficient corporate education programs to transform operational employees into capable leaders. The study examines andragogy, emotional intelligence, and continuous mentoring, highlighting the need to align theoretical learning with the practical demands of the business environment. It also explores process standardization as a pedagogical tool that can accelerate the learning curve for new managers. The results indicate that creating an organizational culture focused on teaching and knowledge sharing is the safest way to ensure company sustainability and the ethical development of future executives.

Keywords: Corporate Education. Leadership Training. Knowledge Dissemination. People Management. Andragogy.

1. INTRODUCTION

Disseminating knowledge within the corporate environment is one of the most important pillars.

critical to the longevity and competitiveness of organizations in contemporary times.

Historically, the training of new professionals occurred organically and in an unstructured way.

depending almost exclusively on the passive observation of the most experienced employees.
