Comparative urbanism: the adaptation of European rationalism to tropical metropolises from the perspective of Franco-Brazilian formation.

Comparative urbanism: adapting European rationalism to tropical metropolises from the perspective of French Brazilian academic formation

Manoel Brancante - Architect and Urban Planner from Mackenzie University (1970). Postgraduate and Bachelor's degree in Urban Planning from Université Paris VIII (1975). Master's degree in Urban Planning from Université Paris VIII (1976). Specialist in urban and regional planning with academic experience in Europe and Brazil.

Summary

This article explores the convergences and divergences between the Brazilian and French schools of urbanism in the 1960s and 1970s, reflecting the author's academic trajectory between Mackenzie University and Université Paris VIII. It analyzes how modernist rationalism, hegemonic in Brazil, was confronted and enriched by the sociological and critical theories of French urbanism after 1968. The study discusses the application of European planning models in tropical contexts, addressing themes such as zoning, social housing, and the role of infrastructure in structuring the territory. It argues that the uncritical importation of exogenous models fails by ignoring Brazilian socio-spatial specificities, advocating for a design synthesis that unites French methodological rigor with the creativity and flexibility necessary to intervene in the complexity of the Latin American metropolis.

Keywords: Comparative Urbanism. Urban Planning. French School. Brazilian Modernism. Université Paris VIII. Mackenzie.

Abstract

This article explores the convergences and divergences between the Brazilian and French schools of urbanism in the 1960s and 1970s, reflecting the author's academic trajectory between Mackenzie University and Université Paris VIII. It analyzes how modernist rationalism, hegemonic in Brazil, was confronted and enriched by the sociological and critical theories of French urbanism post-1968.

The study discusses the application of European planning models in tropical contexts, addressing themes such as zoning, social housing, and the role of infrastructure in structuring the territory. It is argued that the uncritical importation of exogenous models fails by ignoring Brazilian socio-spatial specificities, advocating a design synthesis that unites French methodological rigor with the creativity and flexibility necessary to intervene in the complexity of the Latin American metropolis.

Keywords: Comparative Urbanism. Urban Planning. French School. Brazilian Modernism. Université Paris VIII. Mackenzie.

INTRODUCTION

The training of architects and urban planners in the transition from the 1960s to the 1970s was marked due to profound epistemological transformations. On one hand, Brazil was experiencing the height of modernism. late and technocratic planning of military governments; on the other hand, France, especially the Université Paris VIII (Vincennes) was buzzing with critical thought after May '68, questioning the Rigidity of functionalist urbanism. This article, based on the dual degree obtained in Mackenzie (1970) and in Paris VIII (1975-1976), proposes a reflection on the dialogue between these two traditions. The aim is to understand how the overlap of these distinct academic experiences forges an urban planning practice capable of facing the challenges of contemporary tropical cities.
